

Indoor Model Railroad

Mastermind Bruce Williams Zaccagnino started creating the world's largest [indoor model railroad](#) in 1972 in his basement. It soon outgrew the limited space that later constituted over 100 trains, more than 400 bridges, 250,000 trees, 4000 buildings, 35ft tall mountains, rivers, canyons, and more. The trains running on an 8 miles HO scale track are always on the go.
